Price Increase

Due to the continuing rise in the cost of etchings, I will be increasing the my prices of all goods shipped after 10th February 2006 by approximately 5%. The prices in this catalogue reflect that increase.

This price list supersedes all previous ones.

Introduction

The etchings are listed by building company and type. The code letters after the description of coaches are the prices for etching as a pair of sides, a body kit and a body and underframe kit. Those item without a price marked are not yet available, though some can be readily produced, e.g. side if the body has been drawn. Except for goods vans, roofs are not included, I believe there are better ways of making coach roofs than etching them, neither are wheels or castings. However I do try to include as many components as I can sensibly etch.

Where coach etches can be used for more than one diagram, e.g. GCR and LNER types which variations of width and bogies, only one diagram number is quoted.

The differences between the levels of the carriage etches are

Sides only -- These are meant to be used as overlays to go onto existing plastic bodies. The droplight are etched in the side so that inside face of the sides are smooth to allow them to be glued on to the bodies. I feel that these are only really suitable for flush sided coaches

Bodies -- I try and etch as many components as possible taking into account the area of brass used, and thus the cost. Short arc roofed coaches have roofs, (the BCK027x series have them) others don't but there are a number of aluminium roof profiles available. Corridor screens are included where appropriate, but not compartment partitions. But see <<http://www.mousa.uk.com/Cat/free.html>> for printable partitions.

Underframes consist of a floor plan, solebars and sundry bits. Bogie are not included. Where the underframe is relevant to just a few bodies a separate body is not available etch.

Terms of Business

Delivery

Please note that I while I may have a few etches from current production in stock, it is safer to assume that everything is made to order. I aim for a 6-8 week production cycle, but this can be extended if for instance I cannot fill particular sheets or if I get sidetracked by other work. Delivery times would be a minimum of 4 weeks though 12 weeks is more typically. If delivery could be a problem it is best to check with me before ordering.

Payment

Because of the extended delivery, and because I occasionally make mistakes I have been using the following methods of payments.

1/ For Stock Items and sprung components that marked as available Cash with order

2/ For all other etchings I would prefer that you do not send money with your order. You will be invoiced when the goods are delivered. Payment should be made with in 14 days. If payment is delayed, any further orders will only be supplied against a pro-forma invoice, i.e. I will expect full payment before I release the goods.

3/ You can send a cheque with your order if you must, but it will be on the clear understanding that it will be banked shortly after I receive it. Payment made in this way will not speed the order.

4/ By direct payment in to my bank account. Details are on the invoices.

5/ Payments can now be made through PayPal. This is especially useful for overseas customers. See <http://www.paypal.com> for details

Unfortunately I cannot accept credit cards, except via PayPal.

Stamps are an acceptable for small amounts

Prices

All prices are in Pounds Sterling
Due to the increase in postal costs I have had to start charging for postage. From 1st April 2008 the charges will be:-

Order value less than £10	£1
Order value £10 to £25	£2
Order value £25 to £50	£3
Order value £50 to £100	£4

Orders valued over £100 are post free.

Architectural Windows and Doors

I have a lot of these drawn, but human nature being what it is, they are never quite right for your next project. On the other hand window are not usually difficult to draw.

With this in mind I would be willing to etch individual batches of windows and doors to your specification. Just send me a sketch of the windows you want giving, dimensions of the wall opening, panes etc the numbers needed and the scale. I will make up the artwork from my library and etch the fret.

Loco's,

I have the following etches of loco parts prepared. Most were done as basis for scratch building, some are from aborted kits, most have major parts missing. Contact me if you would like more information about them.

Building Suggestions

I do not like to provide instructions for any of the kits I produce. I firmly believe that if a kit designer has done his job correctly the placing of components will be self evident. This does presuppose however that the builder has access to photographs, at least of the general type of the vehicle in question. Generally I provide locations for most components either by tab and slot or by surface marks.

Having said this there are some 'billisms' which may puzzle people on opening one of my kits for the first time. In no particular order:-

Tabs on the ends of sides

Tabs are provided above and below the each end of the sides. These bend behind the sides and outward to form location stops for the ends.

Hinges

Hinges are provided. They formed from a 'E' shaped etch which fits into slots from the inside. Due to the position of the lower hinge, the body may rest on the upstand of the chassis. If this happens the upstand can be filed back clear of the hinges.

Roofs

Usually only short arc roofs are provided. By and large aluminium sections and various types of molded roofs that are available will be more satisfactory than anything that can be obtained from bending an etched roof. Those roofs that are provided have finely spaced lines etched onto one side. These enable the roof to be curved to the correct profile with the minimum of tools, and are intended to be placed on the inside of the roof. There are also two lines etched across the roof which exactly match the spacing of the ends.

Gaps at the end of solebars

On some kits the solebar is etched shorter than the distance between the kit's headstock, this is deliberate, It is done to remind the builder that these vehicles had wooden headstock some 5 inches thick, and inside faces of the headstock ends should be built up to the correct thickness.

Suspensions

All four and six wheeled stock is fitted with a sprung suspension system. From June 2001 this system is being changed from using etched stainless steel springs to using spring steel wire. The advantage of the new system is that any adjustments are made by simply varying the size of the wire. Suggested wire sizes are 9, 10, 11 or 12 thou diameter steel wire (guitar wire).

The system consists of two parts. A spring support is soldered to the floor on the *outside* of the w-iron, there are witness marks in the floor to help place these. The other part is a bearing carrier. at the top of this there are three 'fingers', the centre one is bent back VERY SLIGHTLY until the spring wire will click into the half etched grooves

Cut a piece of straightened guitar string or phosphor bronze wire to approximately 27mm. The diameter required will vary according to the weight of the wagon, for guitar strings and light wagons 9 or 10 thou wire will be about right, to about 11 or 12 thou for the heaviest outside framed vans.

These sizes relate to 4mm scale, workers in other scales will have to adjust these values.

Once bearing carrier is central on the wire, gently squeeze the 'fingers' until the wire just starts to bend out of alignment. This will retain the wire perfectly well in service, but enables the option of changing the diameter to suit the vehicle weight, or service replacement in the future without difficulty.

I have known people who have soldered the axlebox casting to the bearing, however I think this is doing things the hard way, The easy way is to solder the axlebox to the outside of the w-iron after chamfering the edge of the bearing hole. Then, providing you do not flood the centre of the w-iron with solder, a waisted bearing will fit into the back of the axle box and run in the slot in the w-iron. Usually there is no need to solder the bearing into the bearing holder etching, a spot of paint or varnish is enough to keep the bearing in place while the axle is assembled..

The sideplay on the centre axle of a six wheeled chassis is obtained simply by mounting the centre wheels on a piece of tube which is mounted loosely on a suitable axle. For 4mm scale standard gauge stock the tube would be 2mm O/D, 1mm I/D pinpoint 1mm O/D axles can be obtained from Exactoscale. In others scale I am afraid the modeller will have to make his own.

I do not usually provide suspension on 2mm scale stock, but if you would like to try them then I can etch examples with suitable modifications.

Strengtheners for the tops of sides

My preferred method of building coaches is to fix the roof to the side and the sides and ends, then bolt the body onto the underframe. To this end two there are stiffening strips for the tops of the side, provided. On

the majority of kits these consist of a fold up angle, however on some types of coaches, particularly Gresley's, this is not possible and a single strip is provided.

Small body to underframe brackets are also provided, these should be soldered to the ends approximately one metal thickness above the bottom edge of the ends.

Couplings

These are a fixed bar type coupling for semi permanent rakes. They consist of an etched brass representation of a screw couplings. Wire is needed to represent the brake and heating pipes.

Bend to shape and reinforce the three bends with solder (marked *). Solder both the Vertical and Horizontal links into position. Form the pipe work to match the templates. The coupling should be fixed to the coach with a captive bolt.

If you have sharper than scale curves it is recommended that you use sprung buffers.

General

What is not always appreciated is that, unlike other manufacturers, most of the kits in my range are produced in very small numbers and are usually etched as individual units. This means that designs are constantly being updated and, if I am informed of the occasional mistake, changes can be made to the drawings and new etchings made.

To this end I am always willing to talk to people about my kits and to help them with any difficulties they might have. Please, though, if you want to contact me use the telephone or email.

Wanted -- Photographs

Does anyone build my kits?

I'm looking for photographs of models produced from my etchings, that I can put up on my web site to show folk what a wonderful set of modelers I know

If you can help Please contact me.

Carriage Type Codes

These are standard LNER/BR codes used in the list to identify the particular coaches.

F,S,T,C

Class designations, First, Second, Third and Composite. Second class was rare between about 1890 and 1956 when BR reclassified third class as second.

Prefix B

Vehicle fitted with an internal brake and a guards compartment.

Suffix K

Coaches fitted with corridors and gangways.

Suffix O

Open coaches, i.e. without compartments.

Suffix l

Provided with lavatories, applies only to non-gangwayed carriages.

Suffix G

Luggage. This is usually applied as BG Luggage vans, also known as full brakes.

Prefix R

Catering vehicle, applied to dining cars and buffets as well as carriages fitted with kitchens.

Suffix B

Buffet

Suffix K

with "R" Prefix: Kitchen

Prefix Sl

Sleeper, also Saloon

Suffix X

Six wheeled

Suffix Y

Four wheeled
